## EXPERIENCE

---

**Graduate Researcher**, University of Chicago Summer 2022 – Present  
Research in the areas of quantum control pulse engineering, data-driven control, circuit compilation, and high-radix computation.

**Undergraduate Researcher**, University of Chicago Spring 2021 – Summer 2022  
Optimized short-duration control pulses for high-radix quantum logic gates, motivating a new compiler design that takes advantage of mixed-radix operations. Research resulted in papers at QCE 2022 and ASPLOS 2023 (to appear).

**Research Intern**, Princeton Plasma Physics Laboratory Summer 2020  
As part of the Department of Energy SULI program, designed a neural network to predict fusion plasma cross-sectional density and pressure in real time, for use in control systems. Published work in *Nuclear Fusion*.

## FEATURED PROJECTS

**Chronodrifter**, primary author 2021–present  
2D platformer game in Unity where the player must solve puzzles by slowing and reversing the flow of time. A live web version is available at [jason-chadwick/chronodrifter/](#) (mobile currently not supported).

**Quops**, primary author 2021–present  
Board game based on the rules of quantum mechanics. Players take turns applying quantum logic operations to a board of qubit tiles, aiming to create specific superpositions of states.

**Qiskit textbook**, contributor 2022  
Interactive open-source quantum computing textbook.

**Juqbox.jl**, contributor 2022  
Julia package for solving optimal control problems in closed quantum systems.
